

DATASHEET RW 316 LAWS – TIG Rods

Description and Applications

Austenitic stainless steel welding wire suitable to weld base metals of similar compositions like AISI 316 and AISI 316L. Low C content reduces the possibility of intergranular carbide precipitation and therefore increases the resistance to intergranular corrosion. It is also suitable for welding steel that are stabilized with titanium or niobium. Guarantees a better corrosion resistance than RW 308 LAWS.
