

DATASHEET RW 347 – MIG wire

Description and Applications

Austenitic stainless steel welding wire stabilized with Nb, suitable for welding Cr-Ni stainless parent metals of similar composition stabilized with either Nb, Ti or Ta (type AISI 347, AISI 321). The addition of Nb reduces the possibility of intergranular Cr carbide precipitation and therefore increases the resistance to intergranular corrosion. The low Si content reduces the hot crack sensitivity.
